Continuation Sheet (PTOL-303)

Application No.

Continuation of 3. NOTE: The proposed amendments to claims fail to overcome the art rejection based on McMahon. The McMahon reference teaches a propulsion device configured to produce a "linear" motion as defined by the claims.

Continuation of 5. Applicant's reply has overcome the following rejection(s): In view of the demonstration of the working model, it is acknowledged the claimed device produces a linear motion when used in connection with a wheeled vehicle operating in an environment having a gravitational force. Accordingly, in the event the proposed amendments to the specification are entered, the rejection based on the operability of the device under 35 USC 101 will be withdrawn.

Continuation of 11. does NOT place the application in condition for allowance because: The arguments based on McMahon reference are not persuasive. Applicant argues the McMahon reference does not provide a drive means that translates the first gear which translates the second gear, however this argument is not persuasive because McMahon teaches a first gear (50) meashing with a second gear (35) and driven by a drive means. It is acknowledged the McMahon reference may operate in a different manner, however the claim language does not preclude the linear propulsion device disclosed by McMahon. The claims stand rejected based on McMahon because they fail to define over the prior art in terms of structure.
